# "Analysis of Wine Quality Dataset Using Various Graphs"

The majority of red wines in the dataset have quality ratings of either 5 or 6, with each rating accounting for approximately 50% of the total number of wines
.
Wines with a quality rating of 7 are less common, comprising the remaining 33% of the dataset.

We can observe the trend of the data points. The plot shows a general trend of wines with higher residual sugar content having lower quality ratings, although there are some exceptions. We can see that wines with quality ratings of 3 to 5 tend to have a wider range of residual sugar content, while wines with quality ratings of 6 to 8 have a narrower range of residual sugar content. Additionally, there are very few wines with high residual sugar content and high quality ratings.
